SUMMARY

Software Engineer with 2+ years of experience working on scalable production systems using **.NET, Angular, and Azure**. Focus areas include **event-driven architectures, enterprise integrations, and test automation**, with growing hands-on experience in **LLM-powered features and agentic systems built on MCP**.

EDUCATION

Yeshwantrao Chavan College of Engineering (YCCE) May 2019 – June 2023
B.E. in Information Technology ***GPA: 9.72/10***

EXPERIENCE

NielsenIQ May 2024 – Present

Full Time

Software Engineer *.NET, Angular, Microsoft Azure, SQL Server*

- **Contributing to BASES-Agent**, a multi-tenant system exposing consumer-research capabilities to MCP chat clients (Claude, Copilot, ChatGPT) and REST callers, routing requests to downstream tenant services over MCP via a deterministic plan/execute/compose pipeline; **focused on logging and observability** across the system.
- **Worked on event-driven automation workflows** triggered by business events, helping reduce manual support requests from **10–20/week to 3–4/week**.
- **Contributed to microservices using Azure Service Bus** for asynchronous communication and near real-time data synchronization across distributed services, including resolving recurring data sync issues in a legacy application.
- **Worked extensively with SQL Server**, writing queries and stored procedures and contributing to performance improvements of **20–25%**.
- **Worked on a SharePoint connector** for a Concept Board service to automate image retrieval, **integrating OCR and LLM prompts** to analyze and categorize visual data.
- **Worked on modernizing legacy Angular components** and UI redesigns, and **increased unit test coverage** using Karma and Jasmine across critical components.
- Contributed to an **Agentic AI–assisted Angular migration initiative**, helping automate version upgrades and end-to-end validation using **Playwright screenshot testing** to reduce manual QA effort.

Growth99 January 2024 – May 2024

Internship

Software Engineer Intern *Spring Boot, Angular, PostgreSQL, Redis, Docker, Git, AWS*

- **Developed and enhanced 10+ REST APIs**, improving search, filter, and data retrieval performance for internal teams.
- **Used Redis for API caching and pub/sub notifications**, speeding up search/filter endpoints and powering event notifications alongside webhooks and **Amazon SNS**; **containerized services with Docker** for deployment and local development, including Redis and PostgreSQL environments.
- **Designed and implemented webhooks and supporting data pipelines** for Email and SMS opt-out compliance and data consistency.
- **Built trigger-based messaging workflows** enabling automated communication with leads, patients, and clinics.
- **Resolved 20+ bugs**, including **3 critical production issues**, improving system stability and reducing support escalations.

NielsenIQ February 2023 – May 2023

Internship

Engineer Intern *Spring Boot, Angular, PostgreSQL, Git*

Ecosystem Services (ESS)

- **Resolved 2 major bugs** related to data manipulation and API calls, fixing data storage issues.
- **Contributed to migrating the application** from Netflix Zuul to Spring Cloud Gateway.
- **Increased JUnit test coverage** to above **90%**.

SKILLS

Languages & Frameworks: C#, .NET, ASP.NET MVC/Web API, Angular, TypeScript, JavaScript, Java (Spring Boot), Python
Data & Cloud: SQL Server, PostgreSQL, Microsoft Azure, Docker, Redis
Practices: Microservices Architecture, CI/CD, Design Patterns, Low-Level Design, Git
